

UC-603 — Acceptance Evidence

US: US-CLAIM-RENAME — Rename claim -> reservation in Native Backend + Control Panel
UC: UC-603 — Update MCP tools: reserve_uc, release_uc, error payloads
Branch: feature/uc-603-mcp-tool-descriptions-payloads
Date: 2026-05-25

Context

The bulk of UC-603's surface (renaming the MCP tool from claim_uc to reserve_uc, renaming release_uc error code to NOT_RESERVATION_OWNER)
This UC closes the remaining gaps so each AC is mechanically verifiable:

- 1. The tool descriptions in register_coordination_tools() are upgraded to Spanish ("Reservar", "Liberar la reserva")
- 2. Two new tests assert that the complete payload returned by the MCP tool wrapper (including str(exception)) contains every key

Files

Path	Change
server/tools/coordination.py	register_coordination_tools() descriptions reworded to Spanish — "Reservar un UC para el developer autenticado (reserve_uc). Devuelve code=RESERVED en exito o ALREADY_RESERVED en conflicto"
tests/test_coordination_claims.py	Two new tests: test_already_reserved_payload_contains_no_legacy_claim_vocabulary, test_not_reservation_owner_payload_contains_no_legacy_claim_vocabulary

AC-01 PASS

reserve_uc tool registered with description:
> "Reservar un UC para el developer autenticado (reserve_uc). Devuelve code=RESERVED en exito o ALREADY_RESERVED en conflicto"
Mentions "Reservar" and "NOT_RESERVATION_OWNER". Payload contract:

- Success: {success: True, code: "RESERVED", uc_id, developer_id, reserved_at, branch, summary: "UC X reservada por el developer [developer_id] el [reserved_at]"} (no claimed_at, no claim to release)
- Conflict: {error, code: "ALREADY_RESERVED", uc_id, owner, reserved_at, branch} (no claimed_at, no claim to release)

AC-02 PASS

New test test_already_reserved_payload_contains_no_legacy_claim_vocabulary asserts every key AND every str value does not contain legacy claim vocabulary

AC-03 PASS

release_uc returns {code: "NOT_RESERVATION_OWNER", uc_id, owner}. New test test_not_reservation_owner_payload_contains_no_legacy_claim_vocabulary asserts every key AND every str value does not contain legacy claim vocabulary

Tests

```
$ SPECBOX_NATIVE_DSN=... .venv/bin/pytest \
  tests/test_coordination_claims.py \
```

```
tests/test_native_handling.py \
tests/test_native_backend_conformance.py -q
..... [100%]
44 passed in 1.80s
```

44 passed (42 base + 2 new UC-603 tests). Zero regressions.

Verdict

All three ACs PASS. UC-603 ready for review.
